LDA - Time for a big step back

0.6

## Internship Outcome

delivery method: Moodle + GitHub

repository name: T-PRO-000\_\$PromotionYear\_\$firstname.LASTNAME

• The totality of your source files, except all useless files (binary, temp files, obj files,...), must be included in your delivery.

You spent a lot of time working for your company these last 2 years.

It's now the moment to make it as valuable as possible, synthetising your work into a set of documents, offering a wealth of learning opportunities for now and for the future.

You are expected to deliver a full end-of-mission report that contains these points :

- 1. an **introduction** which is a general description of the area of intervention, of the context and purpose of your mission,
- 2. the description of the **strategies implemented** explaining the objectives, methodologies and achievements,
- 3. a **general review** of your production: results compared against initial objectives and specifications, improvement points, new prospects and challenges...

You must also demonstrate the **full process of designing**, **implementing and delivering a technical solution**, from needs collection to the final release.

You can base your demo on an isolated feature for instance, or on a full project, as you fancy.

If you did not witness all the phases of the solution life-cycle, you are allowed to demonstrate the parts to which you participated.

Still, keep in mind that the broader your mission, the richer the experience.

Feel free to add any useful document to support your report; it may concern:

- technical aspects,
- quality assurance,
- user acceptance,

. . .

Size doest not matter. Still, a ridiculously short or an over-diluted report may be hard to defend. Write down every relevant point, nothing more, nothing less; use your common sense.

You must deliver a report written in the official language of your campus.
